

Solve each problem.

1) $\frac{7}{10} - \frac{2}{7} =$

2) $\frac{4}{5} + \frac{1}{2} =$

3) $\frac{4}{7} - \frac{1}{4} =$

4) $\frac{3}{9} + \frac{1}{10} =$

5) $\frac{5}{6} - \frac{2}{9} =$

6) $\frac{4}{6} + \frac{4}{7} =$

7) $\frac{6}{9} - \frac{2}{5} =$

8) $\frac{1}{2} + \frac{2}{5} =$

9) $\frac{7}{10} - \frac{2}{4} =$

10) $\frac{4}{5} + \frac{2}{4} =$

Answers

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____
7. _____
8. _____
9. _____
10. _____

Solve each problem.

1) $\frac{7}{10} - \frac{2}{7} = \frac{49}{70} - \frac{20}{70} = \frac{29}{70}$

2) $\frac{4}{5} + \frac{1}{2} = \frac{8}{10} + \frac{5}{10} = 1\frac{3}{10}$

3) $\frac{4}{7} - \frac{1}{4} = \frac{16}{28} - \frac{7}{28} = \frac{9}{28}$

4) $\frac{3}{9} + \frac{1}{10} = \frac{30}{90} + \frac{9}{90} = \frac{39}{90}$

5) $\frac{5}{6} - \frac{2}{9} = \frac{15}{18} - \frac{4}{18} = \frac{11}{18}$

6) $\frac{4}{6} + \frac{4}{7} = \frac{28}{42} + \frac{24}{42} = 1\frac{10}{42}$

7) $\frac{6}{9} - \frac{2}{5} = \frac{30}{45} - \frac{18}{45} = \frac{12}{45}$

8) $\frac{1}{2} + \frac{2}{5} = \frac{5}{10} + \frac{4}{10} = \frac{9}{10}$

9) $\frac{7}{10} - \frac{2}{4} = \frac{14}{20} - \frac{10}{20} = \frac{4}{20}$

10) $\frac{4}{5} + \frac{2}{4} = \frac{16}{20} + \frac{10}{20} = 1\frac{6}{20}$

Answers

1. $\frac{29}{70}$

2. $1\frac{3}{10}$

3. $\frac{9}{28}$

4. $\frac{39}{90}$

5. $\frac{11}{18}$

6. $1\frac{10}{42}$

7. $\frac{12}{45}$

8. $\frac{9}{10}$

9. $\frac{4}{20}$

10. $1\frac{6}{20}$
