

Solve each problem.

Answers

- 1) For a birthday party John bought five regular sodas and four diet sodas. If his fridge would only hold three on each shelf, how many shelves would he fill up?
- 2) Haley and her friends were recycling paper for their class. For every four pounds they recycled they earned 1 point. If Haley recycled eighteen pounds and her friends recycled six pounds, how many points did they earn?
- 3) Oliver was organizing his baseball cards in a binder with six on each page. If he had five new cards and thirty-one old cards to put in the binder, how many pages would he use?
- 4) A toy store had fifteen giant stuffed bears in stock when they got another shipment with thirteen bears in it. The put the bears onto shelves with four on each shelf. How many shelves did they use?
- 5) The school's debate team had six boys and four girls on it. If they were split into groups of five how many groups could they make?
- 6) While playing at the arcade, George won seventeen tickets playing 'whack a mole' and eleven tickets playing 'skee ball'. If he was trying to buy candy that cost four tickets a piece, how many could he buy?
- 7) Sam had saved up twenty-six dollars. If he received another nine dollars for his allowance, how many five dollar toys could he buy?
- 8) A pet shelter had four puppies when another thirty-six were brought in. If five puppies a day are adopted, how long would it take for all of them to be adopted?
- 9) A group of five friends went into a restaurant. The chef already had twenty-five chicken wings cooked but cooked five more for the group. If they each got the same amount how many would each person get?
- 10) Janet uploaded ten pictures from her phone and thirty-eight from her camera to Facebook. If she sorted the pics into eight different albums with the same amount of pics in each album, how many pictures were in each of the albums?
