

**Solve each problem.****Answers**

- 1) April's discount flowers was having a sale where each rose was five dollars. If April started with twelve roses and had five roses left, how much money did she earn?
- 2) In a video game, each enemy defeated gives you nine points. If a level has twelve enemies total and you destroy all but seven of them, how many points would you earn?
- 3) Each chocolate bar in a box cost \$5. If a box had fourteen bars total and Lana sold all but five bars, how much money would she have made?
- 4) A new building needed fourteen windows. The builder had already installed seven of them. If it takes three hours to install each window, how long will it take him to install the rest?
- 5) At the fair Sam bought ten tickets. After riding the ferris wheel he had seven tickets left. If each ticket cost two dollars, how much money did Sam spend riding the ferris wheel?
- 6) Jerry had nine video games but seven of them weren't working. If he wanted to sell the working games for \$8 each, how much money could he earn?
- 7) A chef needs nine potatoes for a meal. He has already cooked two. If each potato takes eight minutes to cook, how long will it take him to cook the rest?
- 8) A painter needed to paint eleven rooms in a building. Each room takes three hours to paint. If he already painted four rooms, how much longer will he take to paint the rest?
- 9) Tom had four action figures, but needed eleven total for a complete collection. If each one costs \$9, how much money would he need to finish his collection?
- 10) A worksheet had three problems on it. If a teacher had thirteen worksheets to grade and had already graded four of them, how many more problems does she have to grade?
